

CARE OF YOUR NOBLE BOAT:

General

Your choice of a Noble aluminium boat will be justified as a wise investment for many years to come. Aluminium is the most versatile boat building material in the world and is renowned for its durability. To maintain your Noble Boat after a day on the water simply hose inside and out with fresh water. We recommend Salt Away product to clean your Noble Boat inside and out. Do not use other detergents or chemicals. Ensure that you wash under floor, ledges and into grooves along the bottom. Disconnect battery if fitted. Store your boat sensibly. Dissimilar metals, ash, cement dust, fertilizers, insecticides etc. can corrode aluminium. Wet gear, bags or carpet should be removed from bottom of boat along with any metal tackle or foreign bodies. If your boat is to remain in the water for more than a week or two it may be necessary that anti-fouling is applied to keep the hull bottom clean of marine growth. Check the anti-fouling you plan to use very carefully to ensure that it is completely free of copper or other metals that may cause a chemical reaction when applied to aluminium. For any advice on caring for your Noble Boat please consult with your Noble Boat dealer.

Trailing your boat

Noble aluminium boats are easy to tow being so light, yet so strong for their size. Unfortunately some owners forget that even though they are strong and easily handled they still need to be trailed carefully.

Always make sure that stern is tied firmly (not over tight) to the trailer so it cannot 'jump' around. It is also advisable to secure the bow (in addition to the winch) to prevent movement during transit or sudden stops. Noble Boats must be trailed with a defined row of solid keel rollers to ensure the load on the keel is evenly distributed. These keel rollers should extend to the stern end of the keel. Split keel (wobble) rollers must not be used. The vessel should then be balanced (not carried) using skids at the rear of the trailer.

Powering your boat

It is important to discuss how to power your boat with your Noble Boats Dealer. He can advise you on your motor and fit up requirements.
